

Flexible packaging trends show 'BOPA FILM' opportunities

In recent years, rigid packaging is being replaced by flexible packaging increasingly. The traditional benefits of rigid packaging can now be achieved with flexible packaging with the added advantages of lower cost and greater flexibility.

Meanwhile, the requirements for longer expiration date and freshness for food among end-users remain rising which ask the manufacturer for higher standard of the thinness and lightness for the packaging material and stricter requirements for resource-saving.

BOPA film stands for safety、 non-toxic、 environmental friendly and excellent overall performance, extend the expiration date of food、 reduce the usage of additives and fortify the package to make it thinner and more exquisite, which has incorporated into many facets of their daily lives now and being a mainstream material for future plastic packaging.

As the global leading BOPA supplier, Changsu keeping focus on the tendency of industry trends and customers demand, developing new products and process to cater to the new market. We include a number of conventional BOPA film with varieties of specialty and functional film developed by ourselves, which contributes to the innovation、 upgrade and green development for the whole industry.

For more details, visit Indoplas Hall A2 Booth J-21 at Jakarta International Expo Kemayoran.
